

Expanding Trial Access Through Community Integration

A Valued Local Healthcare Partnership With Central Ohio Primary Care

Remington-Davis, Inc. (RDI) is proud to partner with Central Ohio Primary Care (COPC), one of the nation's largest physician-owned primary care organizations, serving more than 535,000 patients across 80+ locations.

This collaboration strengthens clinical research at the community level by integrating trials within an established, physician-led care network.

Research Embedded in Trusted Care

Local healthcare partnerships connect innovation with everyday medicine.

Through its alignment with COPC, RDI integrates clinical trial opportunities into existing care pathways. Patients continue routine care with their COPC physicians, while RDI study physicians oversee protocol requirements and safety monitoring. Coordinated communication between care teams supports informed participation and seamless study transitions.

Strengthening Performance Through Community Alignment

When research operates within established local networks, meaningful advantages emerge:

Informed Feasibility

Access to an active population supports realistic enrollment forecasting and protocol alignment.

Efficient Candidate Identification

Physician-led insight and integrated workflows enhance outreach and screening quality.

Sustained Engagement

Connection to existing care teams reinforces confidence, continuity, and long-term participation.

A Model for Modern Clinical Research

Partnerships like RDI and COPC's demonstrate how research infrastructure and physician-led systems can:

- **Broaden access to trials**
- **Improve enrollment predictability**
- **Maintain continuity of care**
- **Support durable retention**
- **Advance medical innovation**

A connected healthcare ecosystem creates a clearer pathway from clinical need to clinical advancement.
